TRACKER MANAGEMENT SYSTEM

Group Trackers in a way that suits your organisation

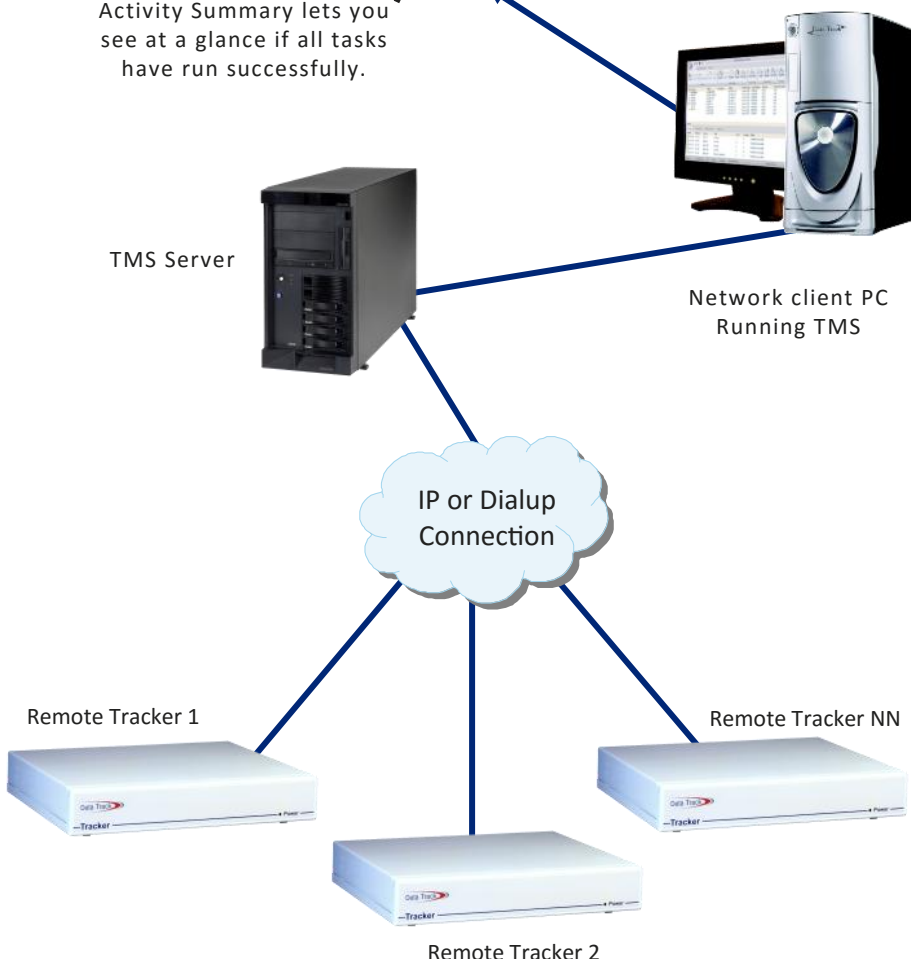

Keep descriptions of a Tracker's purpose and get quick access to its address, serial number and firmware version

User Benefits

- Multi-User software package to manage and administer remote groups of Trackers.
- Reduces the administrative overhead of multi-site Tracker installations.
- User friendly 'Ribbon Interface' makes it easy to perform common admin tasks on large numbers of Trackers.
- Site Wizard simplifies the process of adding a new Tracker into the software.
- Structure the grouping of Trackers to conform to your own naming conventions and locations.
- Use as a way to record basic information on each Tracker.

Activity Summary lets you see at a glance if all tasks have run successfully.

Product Features

- Client/Server architecture for networked multi-user applications.
- SQL database driven.
- Assign a description to a Tracker.
- 'Learn' function to automatically extract the details of a new Tracker.
- Shows each Trackers product type, address, serial number and firmware version.
- Backup existing Tracker configuration.
- Upload a new Tracker configuration.
- Edit a Tracker configuration.
- Upgrade software.
- Install an application.
- Uninstall an application.
- Stores application names and associated activation keys for each Tracker.
- Set the Tracker clock.
- Copy the configuration of one Tracker to another.
- Change the password on the Tracker.
